

Physics 416 Quiz Sheet

Quiz 7 Hyphens and Dashes

Name: _____

Refer to Celia Elliot's lectures and the AIP Style Guide for guidance.

Indicate the words that should be one word or hyphenated.

1. In x ray diffraction the x rays change the direction of their motion.
2. The half life and mean life of a nuclide, though related, are not the same.
3. It is easier to explain the Titus Bode law than to explain the Born Oppenheimer approximation.
4. Unfortunately, self fields are not divergence free.
5. We studied the non relativistic, time independent wave equation for non negative values.
6. We monitored both the out put and the feed back.
7. Multi electron p orbitals lead to many three dimensional integrals.
8. While the function is multi valued, at least it is non negative.
9. The free electron like weakly coupled plasma persisted for 12 ms.
10. The speech by the well known physicist Richard Feynman was well accepted.

Answer the following questions:

11. What is an "appositive"
12. Give an example of correctly using an em dash.
13. Give an example of correctly using an en dash.
